IN THE CLAIMS:

1           23.   (Currently Amended) A vehicle collision avoidance system

2   comprising:

3                   a circumferentially rotating pulsed infrared laser beam scanner  
4   apparatus, wherein the scanner is emitting and receiving the reflected laser  
5 beam signal over the 360° field of view, including a laser pulsed emitter and an  
6 infrared laser sensor for generating a first signal representative of an obstacle  
7 scanned, the laser pulsed emitter rotating circumferentially in a horizontal plane  
8 and a vertical plane simultaneously, the infrared laser sensor circumferentially  
9 rotating synchronously with the laser pulsed emitter in the horizontal plane and  
10 receiving a reflected laser beam signal from the obstacle scanned.;

11                   a processing circuit coupled to the circumferentially rotating pulsed  
12 infrared laser beam scanner apparatus for processing the first signal and  
13 generating a plurality of signals;

14                   a processor coupled to the processing circuit for processing the  
15 plurality of signals and generating a braking signal; and

16                   a braking apparatus responsive to the braking signal.

1           24.   (Canceled)

1           25.   (Currently Amended) The vehicle collision avoidance system of

2   claim 1, wherein the circumferentially rotating pulsed infrared laser beam scanner

3   apparatus is operable to scan an object from 1.6m to 120m.

1  
1 26. (Currently Amended) The vehicle collision avoidance system of  
2 claim 2, wherein the circumferentially rotating pulsed infrared laser beam scanner  
3 apparatus rotates in the horizontal plane at 48 revolutions per second and with a  
4 period of 20.83ms and in the vertical plane at 8 sectors per second and a period  
5 of 20.83ms.

1  
1 27. (Currently Amended) The vehicle collision avoidance system of  
2 claim 1, wherein the circumferentially rotating pulsed infrared laser beam scanner  
3 apparatus emits a laser beam having 28.45W peak power, an average power of  
4 142mW, a wavelength between 1 $\mu$ m ~~[[1 $\mu$ m]]~~ and 1.550 $\mu$ m ~~and~~ excluding the  
5 region between 1.3 $\mu$ m ~~1.3 $\mu$ m~~ and 1.4 $\mu$ m ~~1.4 $\mu$ m~~, and preferably between  
6 1.450 $\mu$ m and 1.550 $\mu$ m, a 1.0ns to 1.25ns pulse width, ~~[[and]]~~ a 10Mhz to 110Mhz  
7 repetition rate, and a 0.002 radian emitting pulsed laser beam divergent angle.

1  
1 28. (Canceled)

1  
1 29. (Currently Amended) A method of avoiding a vehicle collision  
2 comprising:  
3 determining features of an obstacle using a circumferentially  
4 rotating pulsed infrared laser beam scanner apparatus, wherein the scanner is  
5 emitting and receiving the reflected laser beam signal over the 360° field of view.

6 including a circumferentially rotating laser pulsed emitter and a circumferentially  
7 rotating infrared laser sensor;

8

9 processing signals representative of the determined features; and  
10 braking the vehicle in the event the processed signals indicate an  
11 imminent collision.

1

1 30. (Currently Amended) The method of avoiding a vehicle collision of  
2 claim 7, wherein the circumferentially rotating pulsed infrared laser beam scanner  
3 apparatus rotates in a horizontal plane and in a vertical plane simultaneously.

1

1 31. (Currently Amended) The method of avoiding a vehicle collision of  
2 claim 7, wherein the circumferentially rotating pulsed infrared laser beam scanner  
3 apparatus emits a laser beam having 28.45W peak power, an average power of  
4 142mW, a wavelength between 1 $\mu$ m [[1um]] and 1.550 $\mu$ m ~~1.550um~~ excluding  
5 the region between 1.3 $\mu$ m [[1.3um]] and 1.4 $\mu$ m [[1.4um]], and preferably between  
6 1.450 $\mu$ m and 1.550 $\mu$ m, a 1.0ns to 1.25ns pulse width, [[and]] 10Mhz to 110Mhz  
7 repetition rate, and a 0.002 radian emitting pulsed laser beam divergent angle.

1

1 32. (Canceled)

1

1 33, (Currently Amended) A method of avoiding a vehicle collision  
2 comprising:

3                    circumferentially detecting ~~circumferential obstacles as~~ bodies  
4   proximate the vehicle;  
5                    obtaining data from a rotating pulsed infrared laser beam scanner  
6   apparatus including a time when the beam reaches a first edge of each body the  
7   obstacle and a time when the beam reaches a second edge of each body the

1            34.    (Currently Amended) ~~The method of avoiding a vehicle collision of~~  
2   ~~claim 11, further comprising determining a critical point at which an absolute~~  
3   ~~value of  $da/dt$  approaches zero.~~ The method of avoiding a vehicle collision of  
4   claim 11, further comprising determining a critical point at which an absolute  
5   value of the derivative of each bodies acceleration with respect to time  $da/dt$   
6   approaches zero.

1            35.    (Currently Amended) ~~The method of avoiding a vehicle collision of~~  
2   ~~claim 12, wherein determining the relative distance and determining the time of~~  
3   ~~collision are initiated at the critical point.~~ The method of avoiding a vehicle  
4   collision of claim 12, wherein determining the relative distance and determining  
5   the time of collision are initiated at the critical point.

1           36.   (Currently Amended) ~~The method of avoiding a vehicle collision of~~  
2 ~~claim 11, further comprising determining a relative angular velocity of the~~  
3 ~~obstacle.~~ The method of avoiding a vehicle collision of claim 11, further  
4 comprising determining a relative angular velocity of each body ~~the obstacle.~~

1           37.   (Currently Amended) ~~The method of avoiding a vehicle collision of~~  
2 ~~claim 11, wherein determining the time of collision comprises computing a~~  
3 ~~second order factor.~~ The method of avoiding a vehicle collision of claim 11,  
4 wherein determining the time of collision comprises computing a second order  
5 factor.

1           38.   (Currently Amended) ~~The method of avoiding a vehicle collision of~~  
2 ~~claim 11, further comprising determining the bumpiness of a road surface.~~ The  
3 method of avoiding a vehicle collision of claim 11, further comprising determining  
4 the bumpiness of a road surface.

1           39.   (Currently Amended) ~~The method of avoiding a vehicle collision of~~  
2 ~~claim 16, wherein determining the braking force to avoid a collision with the~~  
3 ~~obstacle comprises determining a first braking force in a case where the time of~~  
4 ~~collision is less than 1.5 seconds and a second braking force in a case where the~~

5 ~~road is bumpy.~~ The method of avoiding a vehicle collision of claim 16, wherein  
6 determining the braking force to avoid a collision with each obstacle ~~the obstacle~~  
7 comprises determining a first braking force in a case where the time of collision is  
8 less than 1.5 seconds and a second braking force in a case where the road is  
9 bumpy.

1 40. (Currently Amended) ~~The method of avoiding a vehicle collision of~~  
2 ~~claim 11, wherein determining the time of collision further comprises determining~~  
3 ~~vertical and horizontal components.~~ The method of avoiding a vehicle collision of  
4 claim 11, wherein determining the time of collision further comprises determining  
5 vertical and horizontal components of each body.

1 41. (Currently Amended) ~~The method of avoiding a vehicle collision of~~  
2 ~~claim 11, further comprising determining a rate of approach of the vehicle and the~~  
3 ~~obstacle.~~ The method of avoiding a vehicle collision of claim 11, further  
4 comprising determining a rate of approach of the vehicle and each body the  
5 obstacle.

1 42. (Canceled)

1 43. (Currently Amended) ~~The method of avoiding a vehicle collision of~~  
2 ~~claim 11, wherein the obtaining and determining steps are performed in a point to~~  
3 ~~point vector processing manner.~~ The method of avoiding a vehicle collision of  
4 claim 11, wherein the obtaining and determining steps are performed in a point to  
5 point vector processing manner.

1           44.     (Current Amended) The method of avoiding a vehicle  
2     collision of claim 11, further comprising using an analog circuit to process  
3     the time when the beam reaches the first edge of each body and the  
4     time when the beam reaches the second edge of each body, the relative  
5     distance from the scanner apparatus to each body, a relative angular  
6     velocity of each body, an acceleration of each body and a derivative of  
7     the acceleration.

CONCLUSION

All of the claims now remaining in the application are in condition for allowance and an indication to that effect is respectfully requested.

Respectfully submitted,

Baojia Huang
